SHRAVANI JOSHI

Pune, Maharashtra | 7588282498 | jshravani673@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY:

B.Tech graduate with strong foundations in Machine Learning, Deep Learning, Natural Language Processing, and Generative AI. Experienced in building predictive models, Retrieval-Augmented Generation (RAG) applications, and deploying scalable AI solutions using Python, TensorFlow, LangChain, FAISS, Docker, and FastAPI. Passionate about developing intelligent systems using LLMs and continuously learning emerging AI technologies.

SKILLS:

Programming Languages: Python, SQL, C++ (Data Structures and Algorithms)
Data Science: Feature Engineering, EDA, Machine Learning, Deep Learning, Natural Language Processing, Transformers
Generative AI: LLMs, LangChain, Prompt Engineering, OpenAI API, RAG, Embeddings, Vector Databases, Semantic Search, LLM APIs
Libraries & Frameworks: Numpy, Pandas, Matplotlib, Seaborn, Scikit- Learn, Tensorflow, Keras, Streamlit, Flask, OpenCV, FastAPI, TFLite
Data Analytics Tools: Power BI, Excel
Database: MySQL, SQLite, FAISS, ChromaDB
Tools & Platforms: Docker, Git, GitHub, LangSmith, Hugging Face, Firebase, Vercel, Ollama, Postman
Cloud: Azure Microsoft services (AZ-900)

PROJECTS:

Skin Cancer Detection using Deep Learning — *Python, TensorFlow, Keras, CNN, OpenCV, Flask* *GitHub*

- Built a Convolutional Neural Network with 90% accuracy to classify skin lesions as benign or malignant.
- Applied image preprocessing, augmentation, and hyperparameter tuning to improve performance.
- Evaluated model performance using accuracy, precision, recall, F1-score, and confusion matrix.
- Developed a Flask-based web application for real-time prediction.

AI Document Agent— *Python, LangChain, OpenAI/Groq API, FAISS, Streamlit, Docker* *GitHub*

- Developed an end-to-end Retrieval-Augmented Generation (RAG) system for intelligent document question answering.
- Implemented chunking, embeddings, and semantic search using FAISS vector database.
- Built conversational memory and chat history support with Streamlit UI and Containerized the application using Docker and deployed on Streamlit Cloud.

Bitcoin Price Prediction — *Python, Pandas, Scikit-learn, TensorFlow, Random Forest, LSTM* *GitHub*

- Developed machine learning and deep learning models to forecast Bitcoin prices.
- Applied feature engineering and preprocessing techniques on time-series financial data
- Compared Random Forest and LSTM models using RMSE and MAE metrics.

EDUCATION:

Bachelor of Technology in Electronics and Telecommunications — **July 2022 - June 2026**
AISSMS-INSTITUTE OF INFORMATION TECHNOLOGY
CGPA: 8.07/10

Higher Secondary Education (Class XII) — **May 2021 - March 2022**
Swami Vivekanand Junior College, Jalgaon
Percentage: 63.83%

Secondary Education (Class X) — **June 2019 - March 2020**
B.G. Shanbhag Vidyalaya, Jalgaon
Percentage: 97%

CERTIFICATIONS:

- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate
- Microsoft Azure Fundamentals (AZ-900)
- Deloitte Data Analytics Job Simulation (Forage)
- Introduction to Internet of Things (IoT) by NPTEL
- Linux Training by Spoken Tutorial Project, IIT Bombay
- Power BI Workshop by Office Master
